

TSEGAZEAB FIKRE G/YESUS

Cybersecurity Enthusiast | Aspiring Penetration Tester

Addis Ababa, Ethiopia | tsegazeabfikre01@gmail.com | +251 98 742 0397

[Portfolio](#) [GitHub](#) [LinkedIn](#) [TryHackMe](#)

SUMMARY

Fourth-year Software Engineering student at Jimma University with a hands-on focus on offensive security. Ranked in the top 4% globally on TryHackMe, with practical experience in Linux and Windows privilege escalation, web application security, and structured penetration testing methodology. Seeking an internship to apply and grow these skills under experienced practitioners.

LEADERSHIP & COMMUNITY

Vice President | Jimma University Cyber Security Club | 2025 – Present

- Organize technical workshops and hands-on sessions on ethical hacking and penetration testing for club members
- Promote cybersecurity awareness across the university through events and peer mentoring
- Collaborate with the executive team to plan club activities and grow the cybersecurity community on campus

HANDS-ON TRAINING & PRACTICE

Independent Study & Lab Practice | TryHackMe | Jan 2025 – Present

- Ranked top 4% globally on TryHackMe; completed 60+ rooms across multiple learning paths
- Completed the Penetration Testing learning path, covering enumeration, exploitation, and reporting
- Performed Linux privilege escalation (SUID, cron, PATH abuse) and exploited Windows service misconfigurations in lab environments
- Identified and tested IDOR/BOLA vulnerabilities in deliberately vulnerable web applications
- Practiced structured enumeration methodology using Nmap with manual validation
- Generated and handled reverse shells using Netcat and msfvenom in controlled lab settings
- Completed numerous labs on the PortSwigger Web Security Academy covering SQL injection, XSS, authentication flaws, access control issues, and file upload vulnerabilities

EDUCATION

Bachelor of Science in Software Engineering | Jimma University, Jimma, Ethiopia | Expected 2026

- GPA: 3.71 / 4.0
- Relevant coursework: Networking, Operating Systems, Database Systems, Frontend Development
- Strong foundation in Probability and Statistics, with specialized emphasis on cybersecurity

PROJECTS

Virtual Penetration Testing Lab | Personal Project | Jul 2025

- Built attacker and victim lab environments using VirtualBox to simulate realistic attack scenarios
- Executed full attack chains: enumeration → exploitation → privilege escalation
- Documented findings in structured technical reports

VulnPhantom — Web Vulnerability Scanner | Personal Project (Python) | 2025

- Built a CLI tool to detect XSS, SQL injection, path traversal, and command injection with confidence-scored results
- Published with a full README, license, and security policy on GitHub

Abay Shield — Password Security Analyzer | Personal Project (Python) | 2025

- Built a tool to evaluate password strength and entropy and generate actionable security recommendations

EtherSentinel — Network Discovery Scanner | Personal Project (Python) | 2025

- Built a multi-threaded network scanner for fast host discovery and port scanning

Password Cracking Lab | Personal Project | Apr 2025

- Conducted password auditing using John the Ripper and Hashcat, including dictionary and brute-force attacks
- Identified weak credentials and documented security best-practice recommendations

CERTIFICATIONS

Jr Penetration Tester | TryHackMe | Completed Feb 2026

- Completed the Junior Penetration Tester learning path focused on real-world offensive security techniques
- Gained hands-on experience in reconnaissance, enumeration, exploitation, and privilege escalation
- Practiced web application testing against the OWASP Top 10
